

Mobility Corral

standard bikes . shared bikes . cargo bikes . all-ability bikes . e-scooters

The Mobility Corral offers high-quality protected cycle parking provided on street quickly, at an affordable price.

The flat-pack design makes it easy to transport and install compared with traditional carriageway cycle parking - and more cost effective - because it removes the need to dig or concrete. It is suitable for filtering traffic or testing cycle parking demand. And because it is modular, provision can be scaled up or down to suit changes in demand.

In replacing one car space the corral creates

twelve protected cycle spaces, freeing up pavement for pedestrians to create a more accessible environment. It can also be used to bring order to shared e-scooter or cycle schemes and safety to their riders by guarding them against traffic.

The Mobility Corral's functional design suits various settings and it can be adjusted with options, such as branded front panels or planters for biodiversity.

An innovative, affordable solution for temporary or permanent cycle parking.

Features

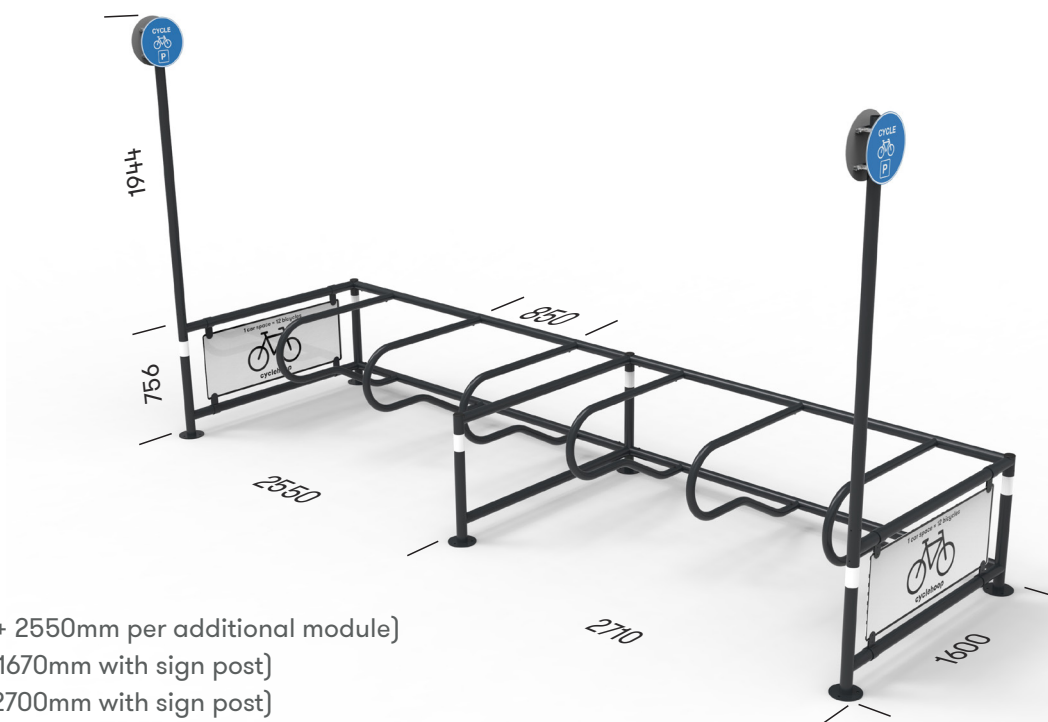

- Protects cyclists and their bikes from road traffic.
- More affordable than traditional carriageway methods.
- Suitable for filtering traffic and blocking high streets.
- Includes integrated cycle parking sign posts.
- Fits twelve cycle spaces in one car space.
- Made using high-quality recyclable materials.
- Flat-packed for easy transport and installation.
- Mobile and modular to scale with demand.
- Wheels and frame lock to the cycle rack.
- Reflective end panels for safety and to prevent damage.
- Durable finish protects bike frames from scratches.
- Elevated internal racks reduce street cleaning.
- Designed and manufactured in the UK.

Options

- Rackless for various mobility types.
- Single module for small spaces.
- Custom branding of front panels.
- End planters for greenery and biodiversity.

Materials

- Recyclable mild steel tubing for framework (60 mm x 3 mm) and cycle racks (48 mm x 3 mm). Zinc primed and nylon powder coated in RAL 7016.
- Recyclable aluminium reflective signage panels (3 mm).

Dimensions

Width 2710mm (+ 2550mm per additional module)

Depth 1600mm (1670mm with sign post)

Height 756mm (2700mm with sign post)

*A standard Mobility Corral, as pictured above, is two modules and has a width of 5260mm. It comes with integrated signposts, racks for twelve bikes and end panel signage.

Installation Method

The Mobility Corral is securely bolted into the ground with expanding ground anchors, or threaded rods fixed with chemical anchoring adhesive and secured with shear nuts.

Options

- Rackless for various mobility types.
- Single module for small spaces.
- Custom branding of front panels.
- End planters for greenery and biodiversity.
