

SolarEye

Solar powered LED light inserted into the ground to increase visibility on cycle paths and quiet ways during hours of darkness.

This is a low profile, durable and skid resistant method of lighting up cycle routes achieved by 8 hours exposure to daylight.

NEW* option: Bat Hat. We re-engineered the standard product by adding a little hat to reduce the upwards light spillage by 98% whilst remaining the same in profile, making the 'Bat Hat' a far friendlier op-tion. Perfect for conservation sensitive areas or dark sky reserves, our delineator won't give off unwanted light fields or interfere with our little nocturnal friends.

Specification

80mm x 27mm

LED (100,000hrs life)

Long life lithium ion battery (8 years +anticipated)

Working temperature: -20 to +70C

Weight: 275g

Options

LED signal: Steady or slow flash

Installed Cross Section
