

Container Cycle Hub

All the features of a permanent hub installed in just one day

Our innovative Container Cycle Hub offers all the security and convenience features of a permanent hub. The key difference is, the container hub requires no groundwork and can be installed in just one day.

Drop one - or ten - in place with this modular style hub. Keep them all in one spot or shuffle a few to another location as your needs evolve.

The Container Cycle Hub can be configured around your requirements. With options including

high security sliding gates, custom graphics and a slam lock, Optima Two Tier Racks (with gas-assist providing 24 cycle parking spaces), solar panels, motion sensor lights, a pump and a repair stand.

Build your hub to your own specification - your sales contact can assist in creating the perfect space for your needs.

The Container Cycle Hub was a finalist in the innovation category at the Healthy Streets Awards 2019.

Features

Materials

Container: Recyclable Corton steel

Gate: Recyclable galvanized mild steel

Dimensions

Length: 20' 1/4"

Height: 9' 8 1/2"

Depth: 8'

Internal height: 8' 10"

* The usable internal height for cycle racks is 8' 8".

Installation method

The Container Cycle Hub can be installed in less than a day. It is fully built offsite, delivered via truck and fork lifted in place, making installation significantly quicker and more cost effective than traditional cycle hubs. If you're not happy with your chosen location, you can easily relocate as the unit is not fixed to the ground.

Installation location must be accessible by delivery truck and forklift to unload.

Supply only or, fully assembled and installed

We offer worldwide shipping with easy to follow assembly documents and US wide installation.
